ABOUT NOVACURA

Novacura is a software company that has been providing solutions to various industries for almost 20 years. We have offices in 10 countries around the world. We share our knowledge and expertise with our customers to help them increase their operational capabilities. Our team of more than 150 experts works every day to identify our customers' needs in order to find the right solution. We work to increase the business value of our customers' services with proven solutions that have already successfully helped more than 220 customers in various industries.

Find out more about our software solutions and services for different industries on [Novacura.com](https://www.novacura.com)

THE STORY OF NOVACURA

It all started in 2005, when the founders of novacura asked

**“ WHY SHOULD OUR CLIENTS
HAVE TO ADAPT TO A
STATIC SYSTEM INSTEAD
OF GETTING ACCESS TO
AN EFFICIENT SOLUTION,
TAILOR-MADE TO SUIT
THEIR BUSINESS?”**

This was when we realized that instead of trying to create one tool that manages everything, we'd instead focus on a tool that helps businesses get more out of the tools they already have. Something that puts business processes front and center, and makes technology fit the process (instead of the other way around).

Novacura was founded in February 2005. The first system developer was hired at the beginning of 2006. Since then, the company has grown to 15 offices in 9 countries on 3 continents. And we continue to grow organically, year after year.

Why? Because our customers have seen real value in what Novacura provides them: a way to easily adapt to changes, continuously improve their business processes, and significantly improve their profits year after year.

OUR OFFER:

Novacura addresses the offer to large and mid-size companies. We have divided our offering into 3 pillars, targeting different types of customers and different needs. All elements share a common focus: optimising business processes with smart software technology.

SOFTWARE SOLUTIONS FOR SELECTED INDUSTRIES:

For almost 20 years, we have implemented our software in the most demanding industries. We attach great importance to one aspect: efficiency – our solutions represent a perfect mix between versatility and simplicity and are optimized for a crew that carries out thousands of operations a day.

[Our unique approach resides in our technology – all our industry solutions are built on our low-code platform. Therefore, we can adjust every solution element to the specific business needs and easily integrate it with other systems.](#)

LOW-CODE TECHNOLOGY FOR SELECTED ERPS:

Every element of our offer is powered by our software platform – Novacura Flow. This is a unique low-code platform that is dedicated to expanding ERP systems and building “ERP applications”. Our platform also includes elements of integration engines and BPM systems. Thanks to that, business people can define their ERP applications by drawing them.

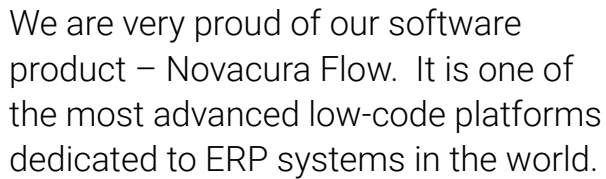

[Our unique approach is deep ERP integration and the application marketplace full of ready-made industry apps. Based on that, customers can use our platform to fill the gaps in ERPs.](#)

IFS IMPLEMENTATION & SUPPORT SERVICES:

Novacura offers a complete set of services related to IFS Applications / IFS Cloud systems – ERP implementation, post-implementation services (maintenance, application management, development), and upgrade services. We pay special attention to our service team competencies – most consultants have over 10 years of experience.

[Our unique approach assumes using our low-code platform to integrate and customize ERP instead of implementing direct ERP modifications.](#)

OUR INDUSTRY FOCUS:

With hundreds of completed projects, we have gained a wealth of experience that allows our consultants to advise our clients on advanced projects in a variety of industries. Check out solutions for your industry and visit our website Novacura.com. Get in touch with our experts today.
