NOVACURA MARKETPLACE

Apps created in 2025 – Summary.

Author: Lukasz Majer

Date: 2025-11-02

INTRODUCTION

WELCOME TO novacura marketplace

Novacura Marketplace is a source of **ready-made applications** for your ERP, that give you innovative insights and speed up the solution-to-delivery time. Once subscribed, you get access to the marketplace library, and you can download the applications and import them into your Novacura Flow environment.

After downloading apps from the marketplace, you can **customize them** or even clone and build your own individual versions tailored to your specific needs.

The current Marketplace library consist of **232 applications** (from big solutions to small examples)

TYPES OF APPLICATIONS WE SERVE:

4

Complete Solution:

A set of applications building a complex solution that can be used “out-of-the-box” in supporting real business processes (eg. WMS, Field Service Management)

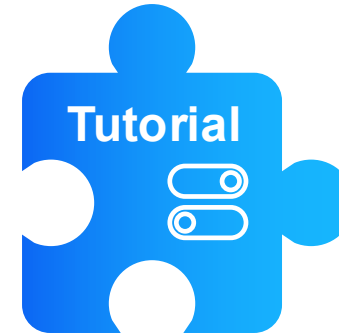

Base Application

A fully functional application that delivers one specific narrow function (pick inventory item, report material for production). Can be used for real business processes, usually surrounded by other apps.

Example:

Simplified app - prepared to demonstrate specific Flow use-case (how to integrate with Hubspot, how to interact with OpenAI API). Useful for customers who build their own final apps.

Tutorial:

A specific type of example that demonstrates new Novacura Flow capabilities that come with new releases

Component:

A fragment of a workflow or dedicated subworkflow – that can be incorporate in a real application (like a library function for repeatable activities).

Flow Script Module:

A specific type of Components – libraries of useful Flow Script functions (eg GS1 decoding)

APPS DELIVERED IN 2025*

36 new applications

- Complete Apps / Base Applications / Examples / Tutorials / Components
- Some of them consist of many workflows

**) As of November 2025*

OUR PRIORITIES IN 2025

- All apps from Flow Classic converted to Flow Connect
- We still develop new apps for Flow Classic

- Examples showing how to incorporate AI services in your apps
- Complete applications powered by AI (eg. for data cleansing)

Administrative Apps

- We want to help you expand the use of Flow in administrative areas
- Procurement, Projects, Master data management, general administration

Examples

- Practical Workflow fragments presenting how to achieve particular things in Flow
- Requested by community

The background of the entire image is a dense, textured field of blue LEGO bricks. The bricks are of various shapes and sizes, including standard 2x4 plates, 1x3 bricks, and some with circular holes. They are scattered and overlapping, creating a complex, three-dimensional pattern. The lighting is even, highlighting the edges and surfaces of the plastic pieces.

novacura marketplace

EXAMPLES & TUTORIALS

BASIC EXAMPLES & COMPONENTS

We prepared a bunch of practical examples showing how to perform repetitive operations in Novacura Flow.

CSV File Importer

This Example shows how to import CSV file to Flow, convert it to a dataset and display in the grid.

CSV File Exporter

This Example shows how to export a Flow dataset to the CSV file format.

List items calculator

This component is prepared to calculate the total value of items added to the list.

 novacuraFLOW
CLASSIC

+

 novacuraFLOW
Connect

COMPONENT: MUTLI-DATA BARCODE HANDLING

Multi Data Barcode Decoder

This Flow Script Module helps decode long **GS1** barcode into separate fields to process them separately in Flow

Decoding 3 fields at once!

EXAMPLES: HUBSPOT INTEGRATION

This application example demonstrates how to connect HubSpot with an ERP system using Novacura Flow. When a new customer is created in HubSpot, the integration automatically sends the customer data to the ERP system, generating a corresponding customer record. This example does not have user steps and HubSpot information is automatically updated.

Ideal for sales and operations teams, the example highlights how data can flow seamlessly between a CRM and ERP without manual input. While the focus here is on customer creation, the same approach can be extended to synchronize other business entities like contacts, deals, or service tickets.

**HubSpot CRM
Integration**

A screenshot of the HubSpot Companies list interface. It shows a table with columns for NAME, COMPANY OWNER, CREATE DATE (GMT+2), and LAST ACTIVITY DATE (GMT+2). The table contains 13 records, all with a status of "Unassigned".

	NAME	COMPANY OWNER	CREATE DATE (GMT+2)	LAST ACTIVITY DATE (GMT+2)
<input type="checkbox"/>	Brunch Drink Love	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Coastline Magazine	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Derek Dematopoulou Dermatology	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Wendie Wharf Baseball Park	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Fischbecker Real Estate	Unassigned	May 20, 2021	Jul 6, 2021
<input type="checkbox"/>	Pumpkin Patch Fitness	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Phononi room	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Touch N' Sea Aquarium	Unassigned	May 20, 2021	Jul 6, 2021
<input type="checkbox"/>	Reflections	Unassigned	May 20, 2021	Jul 6, 2021
<input type="checkbox"/>	It's Your Funeral & Crematorium	Unassigned	May 20, 2021	—
<input type="checkbox"/>	Bob's Burgers	Unassigned	Apr 15, 2021	May 12, 2021

EXAMPLES & COMPONENTS

Handling documents and media files via the IFS API requires specific knowledge.

To make this easier, we've prepared a set of examples that demonstrate how to correctly access documents and media files in IFS (both in IFS Cloud and IFS Applications).

AI-POWERED APPS

BASIC AI EXAMPLES

Our goal is to equip Flow developers with AI capabilities that will help them deliver innovative applications to streamline the daily work of applications end users.

This bunch of examples have been created to demonstrate how to handle basic AI interactions and how to practically use it for data cleaning / manipulation.

Free Prompt – ChatGPT Example

This is the most basic AI example showing integration with ChatGPT. It shows how to send a free prompt to AI and how to parse the text result.

Convert Units – ChatGPT Example

This example uses the power of ChatGPT to convert a list of mixed length units into meters. This can help normalize units when the source data is not unified (eg while importing data)

Dataset Classification – ChatGPT Example

This example shows how AI can automatically perform data classification. In this case, we provide the AI with a list of sample records and a dictionary, and we ask it to assign the appropriate dictionary value to each data record.

ANALYSE DATA GRID WITH AI

This application example demonstrates how to analyze and interact with Excel data within Novacura Flow using AI-integrated natural language processing.

Users start from uploading an Excel file, which is then displayed in a grid format.

Then the user can start manipulating the data by sending various prompts: the user can request filtering the table (eg. by pointing the product category that doesn't specifically exist as a separate column), adding rows, or providing data analysis / summary of the presented data grid.

Analyse Grid Data Using AI

208	Graphics Card GTX 1660	2	230.00
209	RAM 16GB DDR4	8	75.00
210	Motherboard ASUS	3	180.00
211	Laptop Acer	4	820.00
212	HDMI Cable	15	10.00
213	Power Strip	10	18.00
214	Bluetooth Speaker	6	60.00
215	Tablet Samsung	5	300.00

Insights:

- Median Quantity is 5, indicating half of the items have quantities less than or equal to 5.
- Median Price is 100, suggesting half of the items are priced equal to or below \$100.
- Mode Quantity is 3, 4, and 6 (multimodal), which are the most frequently occurring quantities.
- Mode Price is 180, seen most often among the product prices.
- Minimum Quantity is 2, Maximum Quantity is 20.
- Minimum Price is \$8, Maximum Price is \$1100.
- Total Count of entries is 36 items.
- No missing values are detected in the dataset.

Summary:

- The dataset contains a variety of sold products typically priced below \$100, with some high-value items exceeding this trend.
- Sales operations may focus on items with higher frequencies (Quantity: 3, 4, 6) and prices around \$180 for optimal inventory management.

Let me know if you'd like additional filtering or analysis.

Q SEARCH

Item No	Name	Quantity	Price
191	Laptop HP	5	900.00
196	Laptop Dell	4	950.00
201	Laptop Lenovo	3	875.00
211	Laptop Acer	4	820.00
223	Laptop MSI	2	1,100.00

Insights:

- Median Quantity for laptops is 4, showing balanced stock per brand.
- Median Price for laptops is \$900, suggesting mid-tier pricing is prominent.
- Minimum Quantity is 2, Maximum Quantity is 5.
- Minimum Price is \$820, Maximum Price is \$1100 across all filtered laptops.
- Total Count of entries for laptops is 5.
- No missing values for the filtered dataset.

Summary:

- Laptops appear to be high-value items ranging from \$820 to \$1100.
- Stock levels indicate a stable availability, with most laptops having a quantity between 3 to 5 per SKU.

Let me know if further segmentation or analysis is needed.

PREFILL FORM WITH AI

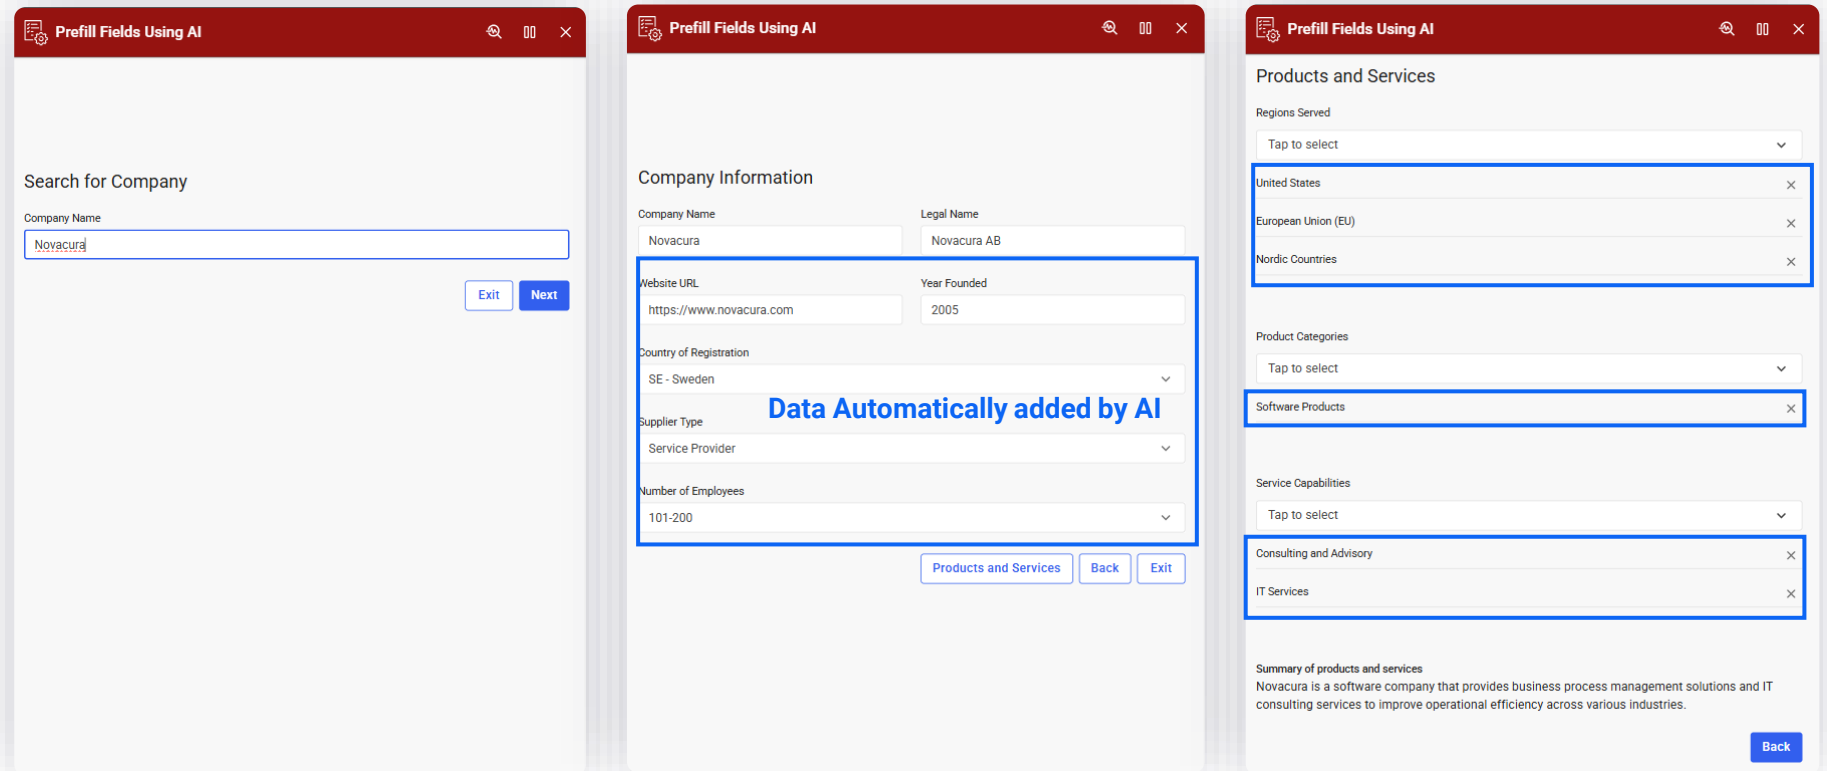

This application example demonstrates how to use AI to automatically prefill forms in Novacura Flow based on a main input phrase such as a company name or identifier. Once a user enters a key term, the application fetches relevant details from external data sources or APIs and populates the form fields automatically.

Users retain full control to review and modify the auto filled information before proceeding, ensuring both speed and accuracy. While this example focuses on company data, the method can easily be extended to support various domains and entity types, illustrating how AI can enhance form-based workflows in Novacura Flow.

18

Prefill Fields
Using AI

The application consists of three main screens, each titled 'Prefill Fields Using AI'.

Screen 1: Search for Company
A search bar contains the text 'Novacura'. Below the search bar are 'Exit' and 'Next' buttons.

Screen 2: Company Information
This screen displays various fields populated with data for 'Novacura'. A blue box highlights the following fields: 'Website URL' (https://www.novacura.com), 'Year Founded' (2005), 'Country of Registration' (SE - Sweden), 'Supplier Type' (Service Provider), and 'Number of Employees' (101-200). A blue text overlay 'Data Automatically added by AI' is positioned over the highlighted fields. At the bottom are 'Products and Services', 'Back', and 'Exit' buttons.

Screen 3: Products and Services
This screen displays a list of product categories, each with a close button (X). A blue box highlights the following categories: 'United States', 'European Union (EU)', 'Nordic Countries', 'Software Products', 'Consulting and Advisory', and 'IT Services'. At the bottom is a 'Back' button.

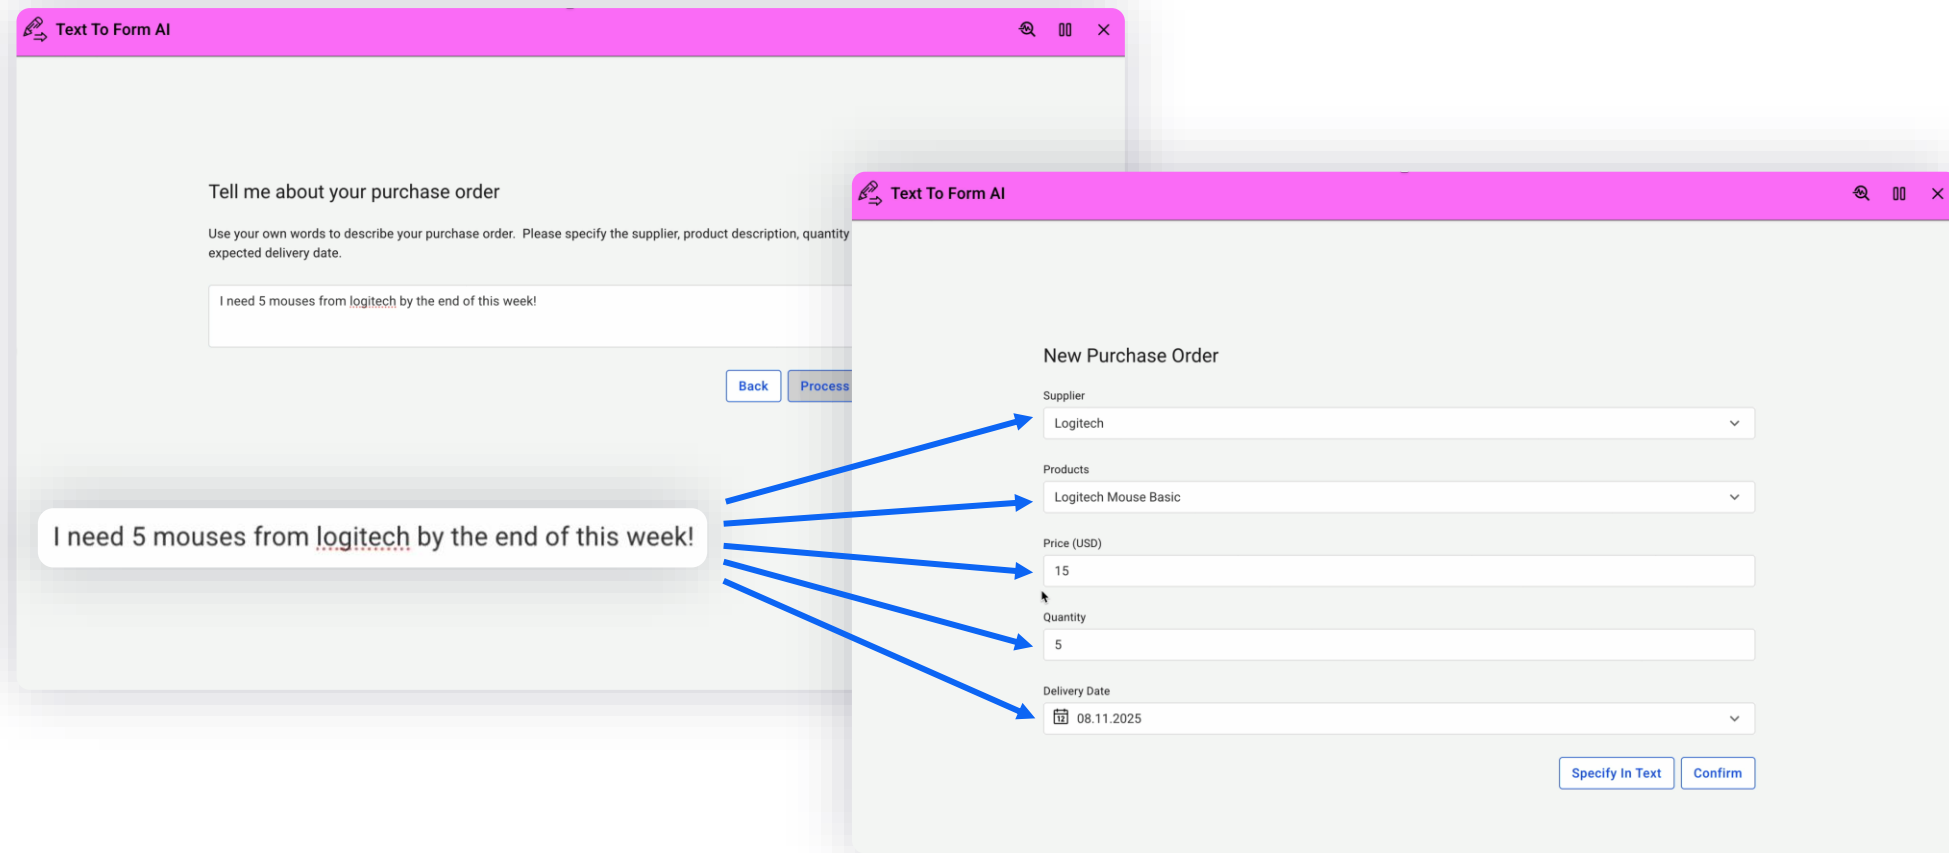

FREE TEXT TO FORM WITH AI

This example demonstrates a new way of interacting with end users: instead of manually selecting all fields in the form, the user can simply describe the desired data configuration (the description can even be dictated), and the AI will automatically translate it into the appropriate form fields.

The user doesn't need to be fully precise - they can say "tomorrow" or "the end of this month" when specifying dates, or "the cheapest product in this category," and the AI will determine the correct values.

Free text to
Form with AI

The screenshot displays the 'Text To Form AI' interface. The top bar is pink with the title 'Text To Form AI' and icons for search, settings, and close. The main area has a light gray background. A text input field contains the text: 'I need 5 mice from logitech by the end of this week!'. Below the input are 'Back' and 'Process' buttons. A blue box highlights the text input, with five blue arrows pointing to the corresponding fields in a 'New Purchase Order' form on the right. The form fields are: Supplier (Logitech), Products (Logitech Mouse Basic), Price (USD) (15), Quantity (5), and Delivery Date (08.11.2025). At the bottom right of the form are 'Specify In Text' and 'Confirm' buttons.

ADMINISTRATION & FINANCE

ADMINISTRATIVE AREA

EMPLOYEE ABSENCE MANAGEMENT

**Submit
Absence Request
(IFS Applications)**

This application allows users to submit new absence requests by selecting the absence type, choosing start and end dates, adding optional comments, and specifying an out-of-office contact. It provides a real-time view of pending requests and quick access to absence history. After reviewing and confirming the summarized request details, users receive instant notifications, and emails are automatically sent to the manager, backup contact, and the requester, with all information recorded in the IFS ERP system.

**Manage
Absence Request
(IFS Applications)**

This application enables managers to review employee absence requests by filtering submissions within a selected date range, with default values set to the current year but fully customizable. It presents all relevant request details—such as requester name, absence type and duration, dates, and status—providing managers with a clear overview. After assessing each request, managers can approve or reject it with a single click and view related information like the employee's planned future absences, the status of upcoming requests, and the full history of approved or rejected absences. Once a decision is made, employees receive automatic email notifications, and all updates are instantly reflected in the IFS ERP system.

EMPLOYEE TIME REPORTING

Employee Time Reporting (IFS Applications)

This application enables employees to efficiently record working hours against projects, directly integrated with the IFS ERP system. Designed with usability and accuracy in mind, the solution supports flexible time input options, enabling daily, weekly, and monthly reporting.

Users can add, edit, and confirm time entries while managing reporting projects within the app itself. Color-coded calendar views offer clear visual feedback on reporting status. The application streamlines time entry workflows, making it easier for employees to stay compliant and for managers to maintain visibility over reported hours, ultimately improving project cost tracking and operational planning.

Employee Time Reporting Yearly Summary (IFS Applications)

The Employee Time Reporting Yearly Summary app helps employees and project team members review and analyze their time reporting history with precision and ease. Built as a read-only companion to the main Employee Time Reporting App, this solution provides visibility into project-level time data across a user-configurable annual range. Users can switch between different years to explore how time was allocated across projects, enabling long-term planning, internal reviews, and audit preparation. The intuitive interface integrates directly with IFS and ensures historical time data remains secure and unaltered.

SUPPLIER INVOICE AUTOMATION

**Supplier Invoice
Automation
(IFS Cloud)**

Workflow:

- Email attachments extraction (PDF invoices)
- AI-driven invoice scanning and field recognition
- Confidence-level checks and invoice validation
- Load package creation + “manual invoices” generation in IFS

Portal:

- Invoice Inbox view (with quick action trigger)
- External Load Package viewer
- Manual Invoice Upload tool
- Error Resolution interface with editable invoice fields
- KPI dashboards for Loaded, Checked, and Created invoices
- IFS invoice data and posting line views for transparency

FIXED ASSETS COUNTING

Fixed Asset Counting

- Efficient & structured solution for fixed asset counting **within IFS**
- Supports the **full audit process**: verifying assets, improving accuracy, reducing errors, and speeding up counts
- Users can select active **Physical Count tasks** and see the related list of fixed assets for verification
- Quick **status update** per asset (e.g., Exists / Missing)
- Option to **add contextual notes and attach photos** to document asset condition
- Access to **detailed asset information** with ability to edit key fields: object group, class, supplier, owner, estimated life
- Improves **data quality** and asset traceability
- **Simplifies** the fixed asset **counting** workflow and reduces reliance on manual tracking or spreadsheets
- Enables more **efficient audits** and faster reconciliation with IFS records

SURVEYS & EXAMS MANAGEMENT

We provide a complete package of applications for collecting end-user feedback, including a generic survey application for gathering open feedback and an exam application for assessing user knowledge through structured tests. For both types of surveys, we offer dedicated applications for survey managers—who create surveys and analyze results—and for survey participants, who respond to the surveys.

WORK PERMITS MANAGEMENT

COMPLETE SOLUTION

Complete management of work permits, enabling employees and subcontractors to enter specific zones and access designated assets.

Includes a dedicated Portal Application to manage the restricted areas, users and issuing work permits for particular users for specified zones.

The solution also covers **Mobile Apps** for regular crew members (who can use them to show the given work permits) and for security officers – who will use it to verify the authenticity and validity of the work permit and to run a security checklist before allowing the crew members to enter the zone.

The solution also integrates with emails and sends work permits in the form of an email with QR codes.

THE FUTURE

OUR DIRECTIONS...

2025

- Further AI examples (also for older ERP versions) – eg. “AI-powered Import”
- AI-powered Events Management App
- PDF reports generator (alternative to HTML_2_PDF)– using MS Word with meta-elements to generate reports (alternative for deprecated Crystal Reports in IFS Cloud)
- IFS Odata Versions Comparison App
- Improvements in IFS MWO application: Offline mode (Flow Connect)
- Parts Creation Wizard – with AI for preventing from creating duplicates
- Survey & Exams Application – Phase 2

2026

- IFS Apps (PLSQL) – to – IFS Cloud (OData + Flow Script) Converter
- Invoice Automation – Phase 2 (eInvoicing, posting)
- Improvements in IFS WMS app package: stramlined processes + additional process-layer (Flow Connect)
- Simplified ShopFloor Reporting App
- Infor M3 – Continuation of the “Supply Chain” package development
- Integration Examples (eg. Salesforce Integration)
- More applications for Flow Portal

IFS Cloud Maintenance / Service / Inspections

Description

Maintenance Survey application is designed for creating and executing maintenance surveys efficiently. Users can easily log maintenance issues, update current status and document findings.

Key features include:

- **Creating New Surveys:** Users can initiate new maintenance surveys tailored to specific needs.
- **Adding Questions:** The application allows for the addition of customized questions to gather relevant information.
- **Updating Existing Questions:** Users can easily edit or update questions in previously created surveys to ensure accuracy and relevance.
- **Changing Survey Status:** The application enables users to modify the status of surveys as needed, providing better oversight and tracking.
- **Survey Execution:** Users can efficiently attempt and complete surveys associated with their specific work assignments.

This application is particularly useful for executing maintenance surveys linked to work assignments, ensuring a streamlined process for collecting and analyzing maintenance data.

BENEFITS OF THE NEW MARKETPLACE HUB PORTAL

- Easy onboarding – quick organization onboarding, ability to grant access to many users from organization
- Better filtering + result-based on Organization attributes (ERP, Flow Version)
- AI recommendations
- “Get App” button directly enables app in the Flow Connect Organization
- Flexibility – the ability to distribute applications in “libraries” (sub-sets of the entire marketplace) = for more affordable price
- Statistics / recommendations
- Access for our Partners & Consultants – also for publishing apps
- **Next step:** the ability to publish apps by Customers
- **Go live:** Q4
